Fentron

Security Services Offering

Assessment and Strategy

Regardless of size, it is critical for organizations to develop a security strategy that is closely aligned with business goals and supports PCI, HIPPA or other compliance regulations.

Fentron helps you stay ahead of current threats and risks by strategically advising on the right technology investments to support your business. Our security teams provide clarity around security strategy and policy design.

We partner with your organization to chart a course to protect and secure your environment while supporting your day-to-day business and accounting for future growth.

- **Identify potential security gaps, manage risk and guide resource allocation to better protect your organization**
- **Assess your current program and develop a roadmap to mature your security posture and technology stack**
- **Expand security, discipline and experience to your technology program**
- **Develop and align security strategies to support your business goals**
- **Help you to protect the primary components of your organization**

Architecture and Engineering

With every passing day, security architecture and infrastructure become increasingly complicated. When organizations only consider architecture from a functional IT perspective, they fail to account for the security elements needed to support evolving infrastructure, accommodate emerging legislative regulations and counter ever-increasing threats.

Leveraging years of experience across retail, medical and finance organizations, our team is uniquely skilled in navigating complex environments, applying proven methodologies and implementing best practices to ensure success. With our diverse skill sets and mastery in technology deployments we recommend proven rock solid solutions for your environment.

- **Alignment between IT and your business to ensure maximized ROI**
- **Select technologies based on your security, compliance and business goals**
- **Optimize, configure and tune your technologies for maximum efficiency and security**
- **Determine your readiness for implementing specific technologies**
- **Implement and integrate your new and existing security technologies to provide optimal value**

À La Carte Offerings

Penetration Testing
Vulnerability Assessment
Virtualization and Private Cloud Security

Methodology

At Fentron, we value understanding your needs and concentrate the first part of our engagement learning your development practices and technology stack to develop a realistic roadmap and propose an ideal security framework. During this process, we focus on aligning with your organizational values and implementing iterative changes to meet the needs of your growing businesses. Our long-term partnership is dependent on us being honest and candid about the changes your organization needs while not pushing unnecessary processes or trendy security products.
